

World Robot Olympiad 2019

REGULAR CATEGORY

4. Table and game mat specifications

4.5. The game mat must be printed with a matt finish /overlay (without reflecting colours!). The preferred printing material is a PVC tarp with around 510 g/m². The material of the game mat should not be too soft (e.g. no mesh banner material).

NB! In keeping to the rule stipulated above (4.5) the ABS mats will now have a matt overlay at the WRO SA National. [They will not reflect as much as the previous gloss and there is a slight wheel grip implication]

4.7. If there is a different setup at a local / national competition (table size, borders, material of game mat etc.), the organizers of the competition need to inform the teams upfront.
